

Zero Emissions by 2050

how to decarbonise the built environment

December 09 - Paris

Symposium

09
DECEMBER

If we are to avoid catastrophic climate change and enjoy an equitable and prosperous future, the built environment must decarbonise by 2050.

But how?

Where will we find the inspiration, programs, tools, partners, and funding?

Join us at the **"Zero Emissions by 2050" Symposium** on December 9 to meet the individuals and organizations leading the international movement to decarbonise the built environment.

- Learn how to use the innovative tools and techniques that are transforming the way buildings and communities are being designed and renovated to eliminate emissions.
- Discover initiatives from ground-breaking financiers that unlock funding streams for climate-compliant community growth.
- Be inspired and renewed by the visionary and effective "doers," offering their insights, experience, and assistance to all who join them on this path.

We all know it must be done.

Don't miss the event specially organized to show us how to do it.

Edward Mazria

PROGRAM

Welcome & Introductions

Why Paris Must Signal Decarbonisation of the Global Economy & Why the Built Environment

Achieving Zero Emissions by 2050: pathways, programs, and tools

Flagship Initiative Panels:

City/District Building Initiatives

Innovative Building Sector Financing

Innovative Building Design and Planning Tools

Conclusion – Call to action

Venue: **Fédération Française du Bâtiment**
7 rue La Pérouse - 75016 Paris

Schedule: **December 9**
2:30 pm Registration
3:00 pm > 6:00 pm Symposium
6:00 pm > 7:30 pm Meet the Speakers
